

AttendTrack

Worker Attendance Management System

Vasavi Constructions

Interior Design / Construction | Hyderabad

DOCUMENT TYPE	VERSION	DEADLINE	STATUS
Project Requirement	v1.0 - Final	30th June 2026	Active

01 PROJECT OVERVIEW

About This Document

This document is the official project requirement specification for your internship engagement with Vasavi Constructions. It supersedes any earlier project titles or descriptions you may have received. Please read carefully.

Project Name	AttendTrack - Worker Attendance Management System
Client Company	Vasavi Constructions
Industry	Interior Design / Construction
Project Type	Web Application - Attendance System
Deadline	30th June 2026

02 ASSIGNED TEAM

#	Student Name	Branch	Roll No
1	Seelam Venkat Sai Reddy	B.Tech AI & ML	252U1R6234
2	Sanjanna Gari Rakshith Reddy	B.Tech AI & ML	252U1R6232
3	Shankari Karthikeya	B.Tech AI & ML	252U1R6236

03 CLIENT CONTEXT & BUSINESS PROBLEM

About Vasavi Constructions

Vasavi Constructions is a construction company that manages workers across multiple construction sites. They need a digital attendance tracking system to replace paper registers.

The Problem Being Solved

Manual attendance management at construction sites leads to:

- Paper registers can be lost or tampered with - no reliable audit trail
- Calculating monthly attendance and wages per worker is time-consuming

- No visibility for managers over attendance patterns across sites

Build a digital worker attendance management system for Vasavi Constructions.

04 PROJECT SCOPE & FUNCTIONAL REQUIREMENTS

Worker Database

- Register workers: name, ID, contact number, designation, assigned project/site, daily wage rate
- Edit and deactivate worker profiles
- Searchable worker list

Daily Attendance Marking

- Mark attendance per worker per day: Present / Absent / Half-Day / Leave
- Mark by site: supervisor marks attendance for workers on their site
- Date-wise attendance view per worker

Attendance by Project/Site

- View all workers assigned to a specific site for a given day
- Filter by date, site, and attendance status

Monthly Attendance Report

- Per worker: total days present, absent, half-days, leaves for the month
- Monthly summary across all workers on a site
- Export to Excel or PDF for records

Salary Calculation

- Basic gross pay calculation: days present x daily rate
- Monthly payroll summary per site
- Total payroll cost for the month

Access Control

- Two roles: Admin (full access) and Site Supervisor (mark attendance for assigned site only, view own site reports)
- Login-protected
- Mobile-responsive - supervisors mark attendance on phone at site

05 NON-FUNCTIONAL REQUIREMENTS

Requirement	Expectation
Mobile-First	Supervisors mark attendance on phone at the construction site - mobile UX is critical
Accuracy	Salary calculations must be mathematically correct
Security	Attendance data is sensitive - login-protected, role-based access
Offline Consideration	Construction sites may have poor connectivity - design for graceful handling of slow connections

06 RECOMMENDED TECH STACK

Note: Recommendation only. Discuss any changes with your internal guide before starting.

Layer	Recommended
Frontend	React.js - mobile-first design priority
Backend	Node.js with Express or Python Flask
Database	PostgreSQL
Auth	JWT with role-based access
Export	SheetJS for Excel, jsPDF for PDF

07 DELIVERABLES & MILESTONE SCHEDULE

Wk	Milestone	Deliverable	Acceptance Criteria
1	Foundation	Auth with roles, worker registration, site setup	Supervisor can log in and see their assigned site workers
2	Attendance	Daily attendance marking, date-wise view, attendance by site	Supervisor marks attendance on mobile; admin sees correct count

3	Reports + Salary	Monthly attendance report per worker, salary calculation, export	Monthly report totals match manual count; salary calculates correctly
4	Polish & Deploy	Mobile-responsive UI, full role-based access testing, live deployment	System live on URL; supervisor role cannot access other sites

08 INFORMATION TO COLLECT FROM CLIENT

Before beginning development, your team must collect the following from Vasavi Constructions via your internal guide or ASE:

- Current worker list: names, designations, daily wage rates, assigned sites
- Active construction site names
- Supervisor names and which sites they manage
- Admin login setup requirements

09 OUT OF SCOPE

The following are explicitly OUT OF SCOPE. Do not spend time building these:

- GPS check-in or biometric attendance
- Payroll processing or bank transfer integration
- HR module (leave applications, performance reviews)

10 EVALUATION CRITERIA

Criteria	Weight	Notes
Attendance marking - accurate and role-separated	30%	Core functionality
Mobile responsiveness - supervisor can use on phone	25%	Critical use case
Monthly reports and salary calculation accuracy	20%	
Role-based access - supervisor cannot access other sites	15%	
Live deployment	10%
